PLATFORM SIMPLIFICATION

Single Pane of Glass

Replaces fragmented access across DNA Center, TAC, Smart Licensing, WebEx, ThousandEyes, ISE, Meraki, AppDynamics, Salesforce, and 8 more platforms into one authenticated surface.

Salesforce CRM Backbone

Cases, Accounts, Contacts, Opportunities, Entitlements, and Service Contracts feed all six SDC consoles — eliminates CRM tab-switching and manual reconciliation.

Digitized Delivery Engine

Network as Code (9 solutions), Services as Code (12 waves), and DDS (12 templates) transform manual delivery into programmable, repeatable workflows.

Cross-Platform Mobile

Native iOS + Android app with SSO (OIDC + PKCE), hardware-backed token storage, and full operational access on the go.

AI-POWERED INTELLIGENCE

AI Copilot Integration AI

Context-aware insights via Microsoft 365 Copilot on every view. Renewal risk, automation readiness, and cross-domain correlation in the operator's workflow.

Predictive Revenue Intel AI

Correlates Salesforce pipeline with incident patterns to flag revenue-at-risk accounts before renewal windows. Triggers proactive outreach across CXM consoles.

Integration Advisor AI

Analyzes P1/P2 incidents, observability gaps, health scores, PSIRT/FN exposure — generates prioritized action steps per operator context.

Automation Scoring AI

Evaluates 1,626 devices against NaC readiness. Identifies 42% Day-1 eligible fleet and generates per-solution adoption roadmaps.

CX ROLE ENHANCEMENT & OUTCOMES

CX ROLE	BEFORE HELIX	WITH HELIX	PROJECTED IMPACT
SDM / TAM	4–6 tools per incident; manual TAC correlation	Single console, auto-TAC linkage, AI triage	60% faster MTTR · 3x throughput
PM / Manager	Separate SF + Power BI + spreadsheets	Embedded Power BI + SF pipeline in one view	4 hrs/wk saved · real-time pipeline
CXM / CSM	Disconnected renewal and entitlement data	AI-flagged renewal risk; SF entitlement feed	25% ↑ renewal capture rate
Engineer	CLI-based ops; no code automation	NaC pipelines (Terraform/Ansible/pyATS)	70% ↓ manual config tasks
Delivery Arch.	Reference designs in documents only	Live 4-phase adoption across 1,626 devices	50% ↓ design-to-deploy cycle
Customer	Slow escalation; fragmented reporting	Proactive AI alerts; unified QBR via DDS	↑ CSAT · ↑ NPS · ↓ Escalations
Platform: Web · iOS · Android · SSO · 19 views · Power BI analytics · Live & offline modes		Security: RBAC (7 roles) · JWT + OIDC SSO · HW-backed mobile auth · Audit trail · Helmet CSP	

Note: These are mock metrics for illustration; they reflect the direction the app is headed with the power of AI—not audited operational or financial results.
